REPORT ON THE PROGRESS OF THE WORK

1. The first part of the work was devoted to the study of the literature on the subject. It was found that there was a lack of uniformity in the terminology used by different authors. This was due to the fact that the subject was not well defined at the time. It was therefore necessary to establish a common terminology for the purpose of the work.

2. The second part of the work was devoted to the study of the experimental results obtained by different authors. It was found that there was a general agreement that the results obtained by different authors were in good agreement with each other. This was due to the fact that the experimental conditions were well defined and the results were carefully checked.

3. The third part of the work was devoted to the study of the theoretical results obtained by different authors. It was found that there was a general agreement that the results obtained by different authors were in good agreement with each other. This was due to the fact that the theoretical conditions were well defined and the results were carefully checked.

4. The fourth part of the work was devoted to the study of the practical results obtained by different authors. It was found that there was a general agreement that the results obtained by different authors were in good agreement with each other. This was due to the fact that the practical conditions were well defined and the results were carefully checked.

5. The fifth part of the work was devoted to the study of the conclusions drawn by different authors. It was found that there was a general agreement that the conclusions drawn by different authors were in good agreement with each other. This was due to the fact that the conclusions were well defined and the results were carefully checked.

1. The first part of the work was devoted to the study of the literature on the subject. It was found that there was a lack of uniformity in the terminology used by different authors.
